

## **Chapter 13: How Many Iterations Are Needed**

This section is already in the book plan, but it has not been written fully yet. The book owner can press Generate section to write this part with the language model connected to TheoryTrace.

Section plan:

Derives the approximate optimal number of Grover iterations, explains the role of the number of solutions, and shows what happens if the algorithm is stopped too early or too late.

### **References**

References will be added when this section is generated.
